

Spider Study

Which Web Is Which?

These spiders have gotten all mixed up! Draw a line from each spider to its web.

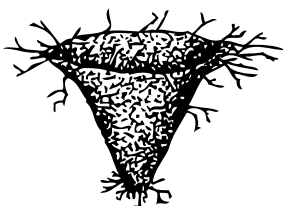

1. Sheet Web

Garden spider

This spider's web looks like a bicycle wheel.

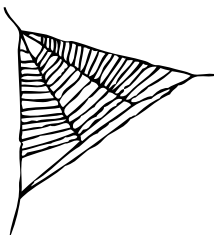

2. Funnel Web

Triangle Spider

This spider's web has only three sides. So it's not a "square" and neither is the spider.

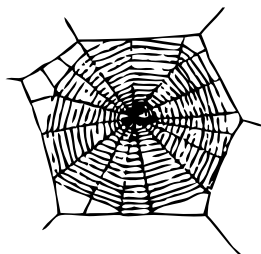

3. Triangle Web

Black Widow

This spider's sloppy web may not look pretty, but it catches lots of meals.

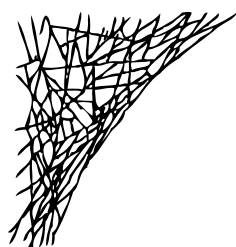

4. Orb Web

Hammock Spider

This spider is named for the web it weaves. It may sound like a good place to nap, but it's not if you're an insect!

5. Tangle Web

Grass Spider

This spider's web is shaped like an ice cream cone. Insects that fall inside might not make it back out!
