

Worm Observation

1. Place soil and worms from worm bed on your observation dish. With your magnifying glass look carefully at everything. Draw a picture of the worms. What else do you see?
2. Hold a worm. Let it slip through your fingers. How does it feel?
3. Find the worm's head. Where is it? _____
Do you find ears or eyes or a mouth? _____
4. Notice the worm's segment or rings. Can you count them? How many are there? _____
5. Measure the length of your worm. _____
What makes this hard? _____
6. What color are your worms? _____ If you look very closely can you see anything through the skin of the worm? What do you see? Draw a new picture of your worm.
7. How does your worm move?
8. Can you see any baby worms? Can you find any eggs? What do they look like? Draw them.
